WORK EXPERIENCE

2013–2018 — Paul Scherrer Institut / EPF Lausanne

Doctoral Assistant

- Developed and validated novel methodology for inverse uncertainty quantification of nuclear safety analysis code using Bayesian statistics and techniques.
- Applied Gaussian process regression technique for metamodeling a computationally expensive simulation code.
- Gain skills in Python and `R` programming.
- Project embedded within the STARS program, a Swiss technical safety organization supporting the Swiss Federal Nuclear Safety Inspectorate (ENSI).
- Frequent technical reporting in an independent working environment.

Aug-Nov 2011 — Paul Scherrer Institut

Intern

Tested, analyzed, and validated different Monte Carlo-based simulation codes for in-core nuclear fuel utilization.

Jul-Oct 2011 — Kernkraftwerk Leibstadt AG

Intern

Industrial internship in the Safety Analysis Group, developing computer model of nuclear power plant for deterministic safety analysis purpose. Gained experience in writing technical report.
